Release Notes, Model 1030 Radon Sentinel™

Product Name: Model 1030 Radon Sentinel
Release Date: 7/16/2013
Release: Software Version 3.0.3
Previous Release: Software Version 3.0.2
User's Guide: Rev B

Minimum Software/Firmware Requirements:

· Software: Operating system – Windows XP or Windows 7, any edition (32- or 64-bit); Microsoft .NET version 4.0 or above

· Hardware: Radon Firmware Version 1.0, available for download from www.sunnuclear.com/support/support.asp.

New Features:

None

Corrections:

· The second page and all subsequent pages of data on the printout or PDF now show the correct timestamps.

· Saving a report to PDF no longer causes blank pages to be printed to default printer.

· When previewing a customer report, data is no longer truncated at the end of the first page.

Open Known Issues:

· Model 1028/1029 Radon Monitors are not supported by Version 3.0 and higher software

· USB devices other than the 1030 Radon Sentinel appear in the selection list of the Continuous Radon Monitor version 3.0 and higher software; selecting these devices does nothing.

· When opening saved Radon data (.txt file), the date and time format configured for the Windows operating system must match the date and time format that were used when the data was saved

· When **Save PDF** is selected from the toolbar, a dialog box opens prompting to save as an XPS document before the PDF is created.
